Xen Image
Posted by ghido - 2010/02/18 09:26

_____

Hello, I'm trying to install VDD for done some tests it on my network (right now I'm using a LTSP server with 30 linux client).
I have some problem in the creation of vm image for fedora / slackware because the links in the documentation v0.3 are not working.
Thanks

Ghido

Hi ghido, and welcome to VDD-Project.

I've just checked the links. They are working properly.
These are the links where you can find both Fedora and Slackware ready to use images.

Fedora
Slackware

The Xen documentation where I got the URLs above is this.

Where did you find the broken URL exactly?

_____

Hi, i try to use vdd project custom image:

wget http://www.vdd-project.org/fedora/fedora11_mod.tar
wget http://www.vdd-project.org/slackware/slackware13_mod.tar

but now i'll try to use stacklet.com images.

thanks

Ghido

You are welcome.

You are right, that URLs are not working. I'll check why as soon as possibile.
In any case, I suggest you to use the stacklet.com images, so that you can personalize them as you like.

_____

Just to inform you.
As reported in the last documentation, these links are no longer available due to a historical reason.
